

Apply for a PhD that will make a difference!

Wind-farm installation

Ocean-going transport

Shipping and other offshore operations are essential for societies' needs. The demand for shipping and offshore operations will only increase. But ships run on fossil fuels (even modern ones) and therefore emit large quantities of greenhouse gasses and other polluting emissions.

CHANGE

Change is needed. To achieve carbon-free and pollutant-free power generation on board of ships and other remote / mobile heavy-duty applications a new solution will be researched:
